TARIFA / PRICE LIST / TARIF
AS0026

En Vincke ofrecemos una completa gama de componentes hidráulicos de alta calidad, diseñados para garantizar rendimiento, durabilidad y fiabilidad en todo tipo de aplicaciones industriales.
Selecciona entre bombas, motores, válvulas, bloques, intercambiadores, etc compatibles con los estándares más exigentes del mercado.
Nuestro equipo técnico te acompaña para que elijas la mejor solución según tus necesidades.
Confía en Vincke. Confía en la hidráulica que funciona.

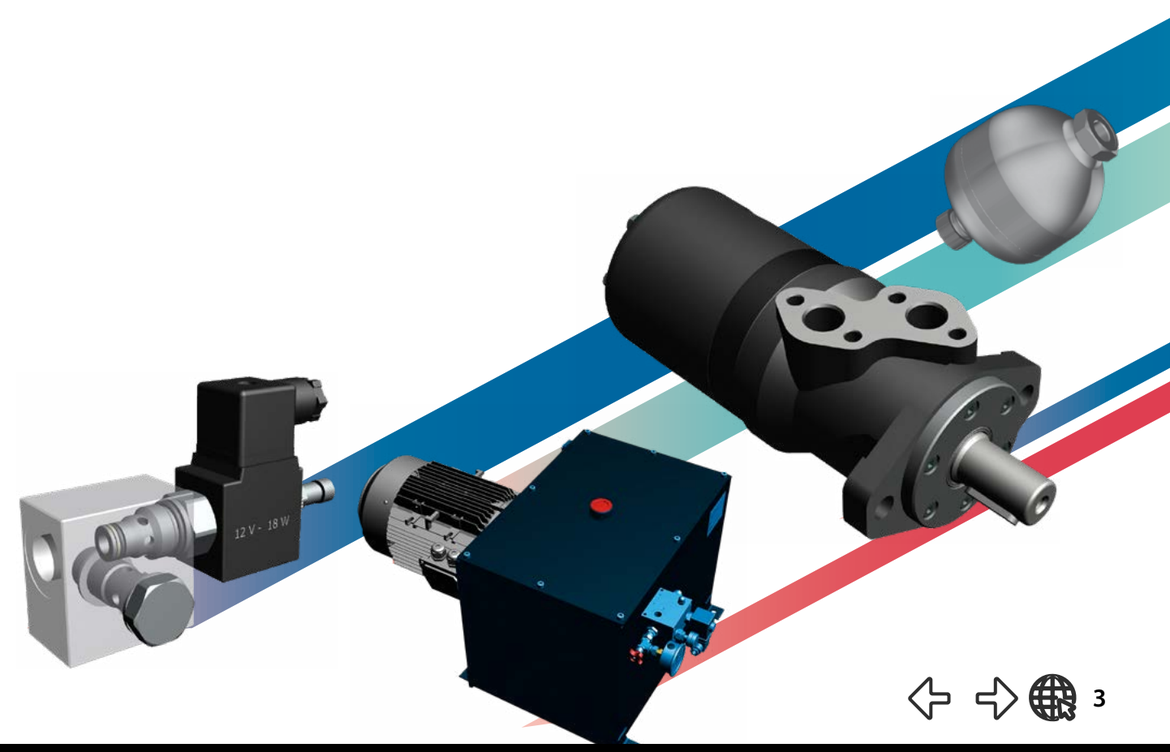

Vincke offers a complete range of high-quality hydraulic components designed to deliver performance, durability, and reliability across all types of industrial applications.
Choose from our pumps, motors, valves, manifolds, heat exchangers, and fittings, all built to meet the highest market standards.
Our technical team is here to help you find the right solution for your needs.
Trust Vincke. Trust the hydraulics that work.

Composants hydrauliques
Vincke propose une gamme complète de composants hydrauliques de haute qualité, conçus pour offrir performance, durabilité et fiabilité dans tous types d'applications industrielles.
Découvrez nos pompes, moteurs, valves, blocs, échangeurs thermiques et raccords, conformes aux standards les plus exigeants du marché.
Notre équipe technique vous guide pour trouver la solution la plus adaptée.
Faites confiance à Vincke. Faites confiance à l'hydraulique qui fonctionne.

En Vincke, hemos desarrollado una gama de componentes hidráulicos de alta calidad que han demostrado su eficiencia y fiabilidad durante décadas.

Nuestro equipo técnico y comercial, altamente experimentado, está a tu disposición para asesorarte en la selección de los componentes más adecuados para cada aplicación hidráulica.

Somos tu mejor solución.

Contamos con una amplia gama de bombas, motores, bloques, intercambiadores y válvulas hidráulicas, perfecta tanto para conformar kits completos como para fabricar centrales hidráulicas o mantener los equipos ya existentes.

Una marca con respaldo real.

Hemos construido la marca Vincke sobre la base de:
• Colaboración con OEMs líderes.
• Una sólida red internacional de distribución, presente en países como Francia, Dinamarca, Argelia, India, Colombia, México, Portugal, Noruega, Bélgica, Italia, Marruecos, Grecia, Países Bajos, Finlandia, Serbia, Estonia, Croacia, Turquía…

Producimos más de 12.000 equipos al año entre minicentrales y grupos hidráulicos con nuestra marca de componentes.

Esto nos posiciona como un competidor internacional de primer nivel en el sector de la hidráulica.

At Vincke, we have developed a range of high-quality hydraulic components that have been working efficiently and reliably for decades.

Our experienced technical and sales team is ready to help you select the most suitable components for each hydraulic application.

We are your best solution.

We offer a wide range of pumps, motors, manifolds, heat exchangers, and hydraulic valves, ideal for assembling complete kits, building hydraulic power units, or simply maintaining your existing systems.

A brand built on real value.

We've built the Vincke brand on:
• Partnership with leading OEMs.
• A strong international distribution network, operating in countries such as France, Denmark, Algeria, India, Colombia, Mexico, Portugal, Norway, Belgium, Italy, Morocco, Greece, the Netherlands, Finland, Serbia, Estonia, Croatia, Turkey…

We manufacture over 12.000 units annually, including mini power packs and hydraulic systems, with our brand of components.

This makes us a top-tier international competitor in the hydraulic market.

Chez Vincke, nous avons conçu une gamme de composants hydrauliques de haute qualité, reconnus pour leur efficacité et leur fiabilité depuis plusieurs décennies.
Notre équipe technique et commerciale expérimentée est à votre écoute pour vous aider à choisir les composants les plus adaptés à chaque application hydraulique.

Nous sommes votre meilleure solution.

Nous proposons une large gamme de pompes, moteurs, blocs, échangeurs thermiques et valves hydrauliques, idéale pour constituer des kits complets, concevoir des centrales hydrauliques, ou tout simplement assurer la maintenance de vos équipements existants.

Une marque fondée sur la confiance.

La marque Vincke s'est construite grâce à :
• Des partenariats solides avec des OEM de référence.
• Un réseau international de distribution performant, actif dans des pays tels que la France, le Danemark, l'Algérie, l'Inde, la Colombie, le Mexique, le Portugal, la Norvège, la Belgique, l'Italie, le Maroc, la Grèce, les Pays-Bas, la Finlande, la Serbie, l'Estonie, la Croatie, la Turquie…

Nous fabriquons plus de 12.000 équipements par an, entre minicentrales et groupes hydrauliques, avec notre marque de composants,
Cela fait de nous un acteur international de premier plan sur le marché de l'hydraulique.

BOMBAS VINCKE
VINCKE PUMPS
POMPES VINCKE

Vincke ofrece una amplia gama de bombas de engranajes simples y múltiples, helicoidales, y de pistones con caudal fijo y variable.

Estos equipos destacan por su alta resistencia y durabilidad, siendo ideales para entornos de trabajo pesado y capaces de soportar transmisiones de altas presiones hidráulicas.

Gracias a su construcción robusta, las bombas alcanzan altos niveles de eficiencia volumétrica y mecánica.

Nuestro equipo técnico-comercial está disponible para asesorarte y ayudarte a elegir la bomba más adecuada para tu aplicación.

Vincke provides a wide range of pumps including single and multiple gear pumps, helical pumps, and fixed or variable displacement piston pumps.

These units offer excellent durability and resistance, suitable for heavy-duty environments and capable of withstanding high hydraulic pressure transmissions.

High volumetric and mechanical efficiency is achieved through their robust construction.

Our technical sales team is available to assist and advise you in selecting the right pump for your needs.

Vincke propose une large gamme de pompes à engrenages simples et multiples, hélicoïdales, ainsi que de pompes à pistons à débit fixe et variable.

Ces équipements se distinguent par leur grande résistance et durabilité, adaptés aux environnements de travail intensifs et capables de supporter des transmissions à haute pression hydraulique.

Leurs niveaux élevés d'efficacité volumétrique et mécanique sont obtenus grâce à une construction robuste.

Notre équipe technique commerciale est à votre disposition pour vous conseiller et vous aider à choisir la pompe la mieux adaptée à votre application.

ELECTROVÁLVULAS, VÁLVULAS Y BLOQUES CETOP VINCKE

VINCKE CETOP SOLENOID VALVES, VALVES AND MANIFOLDS

ÉLECTRO-VALVES, VALVES ET BLOCS CETOP VINCKE

Vincke ofrece los tamaños CETOP03/ NG6, CETOP05/ NG10 CETOP7/NG16, CETOP8/NG25 y CETOP10/ NG32, así como una gama completa de placas y bloques, tanto en acero como en aluminio.

En nuestra propia fabricación de centrales y minicentrales, utilizamos al año más de 25.000 válvulas y electroválvulas CETOP Vincke. TODA UNA GARANTÍA.

Vincke offers CETOP03/NG6, CETOP05/ NG10 CETOP7/NG16, CETOP8/NG25 and CETOP10/NG32 sizes as well as a complete range of blocks and manifolds both in steel and aluminium.

Within our own manufacturing process of power packs and hydraulic power units, we use over 25,000 valves and solenoid valves annually. THE BEST OF GUARANTEES.

Vincke propose les tailles CETOP03/ NG6, CETOP05/ NG10, CETOP7/NG16, CETOP8/NG25 et CETOP10/ NG10, ainsi qu'une gamme complète de plaques et de blocs, en acier et en aluminium.

Dans notre propre production de centrales hydrauliques et de mini centrales hydrauliques, nous utilisons plus de 25.000 distributeurs et électro distributeurs CETOP Vincke par an. LA MEILLEURE DES GARANTIES.

VÁLVULAS EN LÍNEA VINCKE
VINCKE IN-LINE VALVES
VALVES EN LIGNE VINCKE

Nuestra línea de válvulas hidráulicas ofrece soluciones precisas para el control eficiente del flujo y la presión en sistemas hidráulicos. Diseñadas para soportar las condiciones más exigentes, nuestras válvulas garantizan un rendimiento duradero y seguro.

Disponemos de una amplia variedad que incluye válvulas de control direccional, reguladoras de presión, y de caudal, adaptadas a múltiples aplicaciones industriales.

Confía en el respaldo técnico de Vincke para seleccionar la válvula que mejor se ajuste a tus necesidades.

Our line of hydraulic valves provides reliable and precise solutions for efficient flow and pressure control in hydraulic systems. Engineered to withstand the toughest conditions, our valves ensure durable and safe performance.

We offer a wide range including directional control valves, pressure relief valves, and flow control valves, suitable for various industrial applications.

Trust Vincke's technical expertise to help you choose the valve that best fits your needs.

Notre gamme de vannes hydrauliques offre des solutions fiables et précises pour un contrôle efficace du débit et de la pression dans les systèmes hydrauliques. Conçues pour résister aux conditions les plus exigeantes, nos vannes garantissent une performance durable et sécurisée.

Nous proposons une large variété comprenant des vannes de commande directionnelle, de régulation de pression et de débit, adaptées à de nombreuses applications industrielles. Faites confiance à l'expertise technique de Vincke pour choisir la vanne la mieux adaptée à vos besoins.

DISTRIBUIDORES MONOBLOC VINCKE

VINCKE MONOBLOCK DIRECTIONAL CONTROL VALVES

DISTRIBUTEURS MONOBLOCS VINCKE

En Vincke, nuestras válvulas de control hidráulico están diseñadas para iniciar o detener con precisión el flujo de fluido hacia cilindros o motores hidráulicos. Pueden ser accionadas manualmente o mediante solenoide, según la aplicación. La cantidad de actuadores que una válvula puede controlar depende del número de secciones (spools) incorporadas. Los caudales indicados corresponden al máximo permitido en litros por minuto, garantizando eficiencia y seguridad en cada operación.

Confía en el respaldo técnico de Vincke para seleccionar el distribuidor que mejor se ajuste a tus necesidades.

At Vincke, our hydraulic control valves are designed to accurately start or stop fluid flow to hydraulic cylinders or motors. They can be operated manually or via solenoid, depending on the application.

The number of actuators a valve can control depends on the number of spools integrated into the valve. The listed flow rates indicate the maximum allowed in liters per minute, ensuring efficiency and safety in every operation.

Trust Vincke's technical expertise to help you select the control valve that best fits your needs.

Chez Vincke, nos distributeurs hydrauliques sont conçus pour démarrer ou arrêter avec précision le flux de fluide vers les vérins ou moteurs hydrauliques. Ils peuvent être actionnés manuellement ou par électrovanne, selon l'application.

Le nombre d'actionneurs qu'un distributeur peut contrôler dépend du nombre de tiroirs intégrés. Les débits indiqués correspondent au maximum autorisé en litres par minute, garantissant efficacité et sécurité à chaque utilisation.

Faites confiance à l'expertise technique de Vincke pour choisir le distributeur le mieux adapté à vos besoins.

MOTORES HIDRÁULICOS VINCKE

VINCKE HYDRAULIC MOTORS
MOTEURS HIDRAULIQUES VINCKE

Motores hidráulicos orbitales Vincke
Los motores hidráulicos orbitales Vincke se destacan por su eficiencia, robustez y rendimiento excepcional en aplicaciones industriales exigentes.

Diseñados para ofrecer un par alto y un funcionamiento suave, son ideales para equipos móviles, maquinaria agrícola, y sistemas hidráulicos industriales.

Gracias a su construcción de alta calidad y materiales resistentes, garantizan una larga vida útil incluso en condiciones severas de trabajo.

Vincke orbital hydraulic motors stand out for their efficiency, robustness, and outstanding performance in demanding industrial applications.

Designed to provide high torque and smooth operation, they are ideal for mobile equipment, agricultural machinery, and industrial hydraulic systems.

Thanks to their high-quality construction and durable materials, they ensure a long service life even under harsh working conditions.

Les moteurs hydrauliques orbitaux Vincke se distinguent par leur efficacité, robustesse et performances exceptionnelles dans les applications industrielles exigeantes.

Conçus pour fournir un couple élevé et un fonctionnement fluide, ils sont idéaux pour les équipements mobiles, les machines agricoles et les systèmes hydrauliques industriels.

Grâce à leur construction de haute qualité et à des matériaux résistants, ils garantissent une longue durée de vie même dans des conditions de travail difficiles.

MOTORES ORBITALES VINCKE
SERIES VNKP & VNKR

VINCKE ORBITAL MOTORS – VNKP & VNKR SERIES
MOTEURS ORBITAUX VINCKE – SÉRIES VNKP & VNKR

¿Por qué los motores Vincke no son iguales a muchos otros?

Juntas de alta presión (200 bar).

En la mayoría de los casos, NO necesitas línea de drenaje.

Menos componentes, menos problemas. Doble rodamiento de agujas.

Soporta cargas axiales y prolonga la vida del eje.

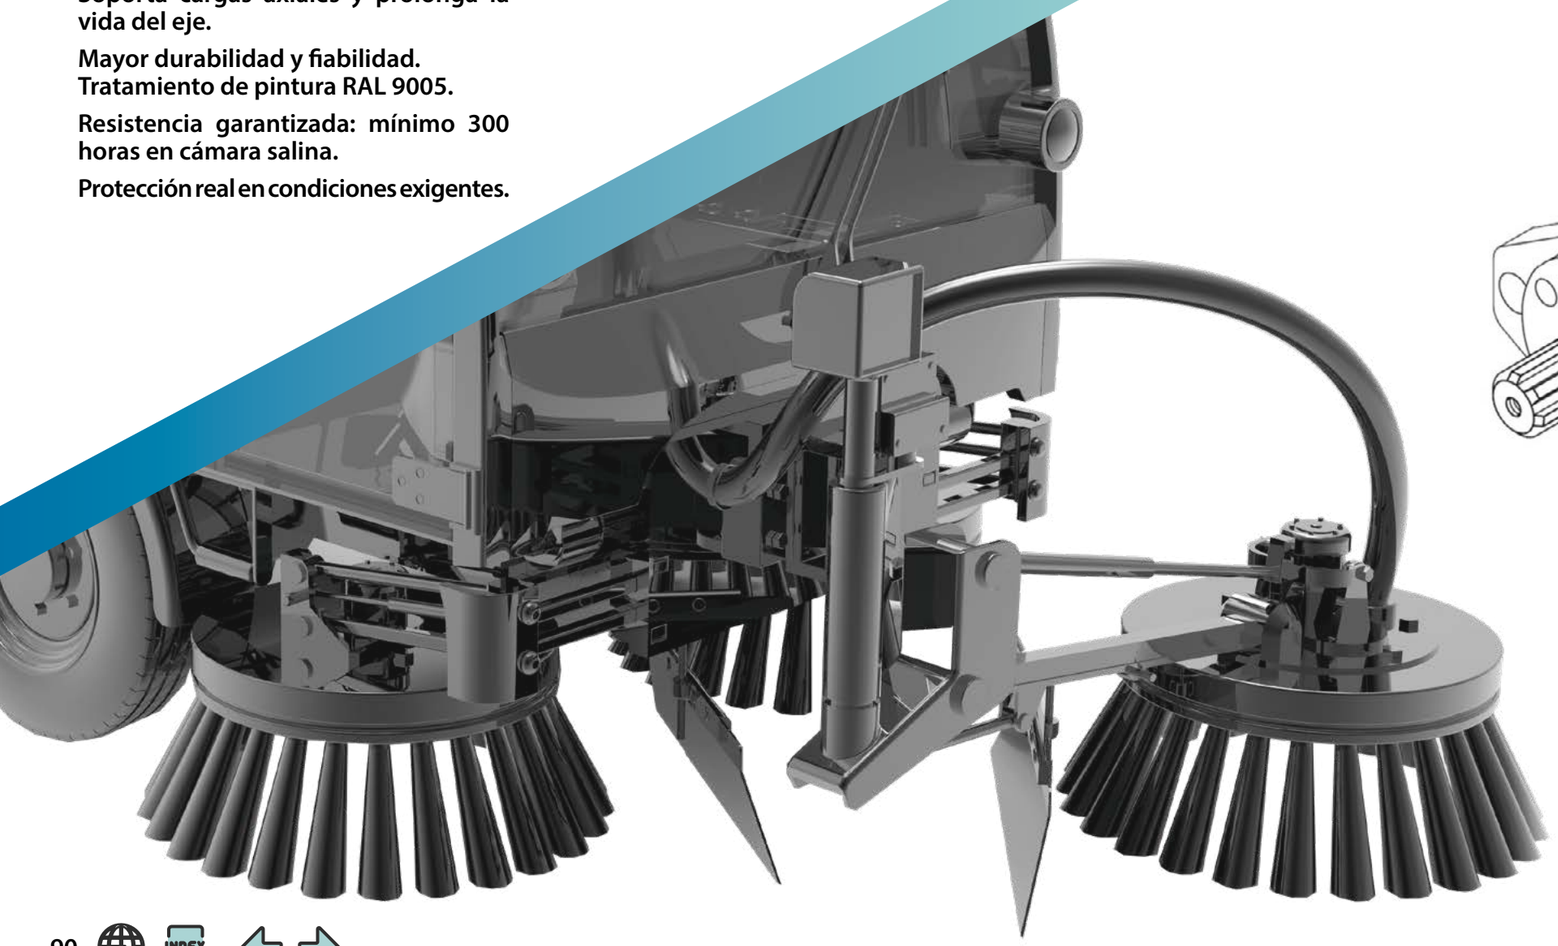

Mayor durabilidad y fiabilidad. Tratamiento de pintura RAL 9005.

Resistencia garantizada: mínimo 300 horas en cámara salina.

Protección real en condiciones exigentes.

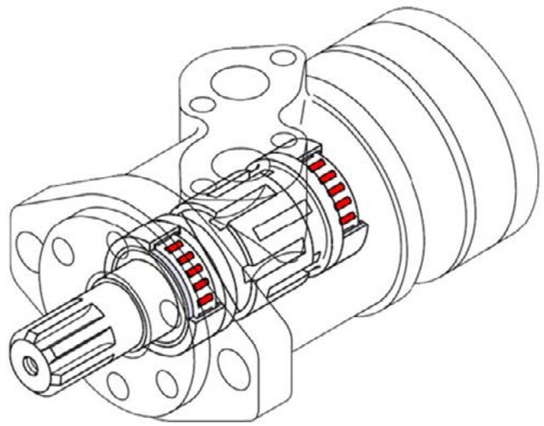

Ventajas clave

- **Montaje más sencillo**
- **Menor mantenimiento**
- **Larga vida útil**
- **Ideal para aplicaciones exigentes**
- **Calidad y control europeo**

Key Advantages

- Easier installation
- Lower maintenance
- Longer lifespan
- Ideal for demanding applications
- European quality & control

Avantages Clés

- *Installation simplifiée*
- *Moins d'entretien*
- *Longue durée de vie*
- *Idéal pour les applications intensives*
- *Qualité & contrôle européens*

Why are Vincke motors not like most others?

High-pressure shaft seals (200 bar).

In most cases, NO need for a drain line.

Fewer components, fewer issues.

Double needle bearing

Handles axial loads, protects the shaft. Longer service life.
RAL 9005 paint coating

Corrosion resistance: min. 300 hours in salt spray chamber.

Built for tough environments.

Pourquoi les moteurs Vincke ne sont pas comme les autres ?

Joints d'arbre haute pression (200 bar)

Dans la plupart des cas, PAS besoin de ligne de drainage.

Moins de composants, moins de problèmes.

Double roulement à aiguilles

Protège l'arbre contre les charges axiales.

Durée de vie prolongée.

Revêtement peinture RAL 9005

Résistance à la corrosion : minimum 300 heures en brouillard salin.

Conçus pour les environnements exigeants.

INTERCAMBIADORES VINCKE

VINCKE HEAT EXCHANGERS
ECHANGEURS VINCKE

Los intercambiadores de calor hidráulicos Vincke están diseñados para disipar eficazmente el calor generado en circuitos hidráulicos, manteniendo el fluido a temperaturas óptimas de operación. Esto no solo mejora el rendimiento del sistema, sino que prolonga la vida útil de componentes críticos como bombas, válvulas y cilindros.

Disponibles en versiones de aire y de agua, nuestros modelos se adaptan a múltiples aplicaciones industriales y móviles.

Confía en el respaldo técnico de Vincke para seleccionar el intercambiador que mejor se ajuste a tus necesidades.

Vincke hydraulic oil coolers are designed to efficiently dissipate the heat generated in hydraulic systems, keeping fluid at optimal operating temperatures. This improves system performance and extends the life of key components such as pumps, valves, and cylinders.

Available in both air- and water-cooled versions, our models adapt to a wide range of industrial and mobile applications.

Trust Vincke's technical expertise to help you select the oil cooler that best fits your needs.

Les échangeurs de chaleur hydrauliques Vincke sont conçus pour dissiper efficacement la chaleur générée dans les circuits hydrauliques, maintenant le fluide à des températures de fonctionnement optimales. Cela améliore non seulement les performances du système, mais prolonge également la durée de vie des composants critiques tels que les pompes, les distributeurs et les vérins.

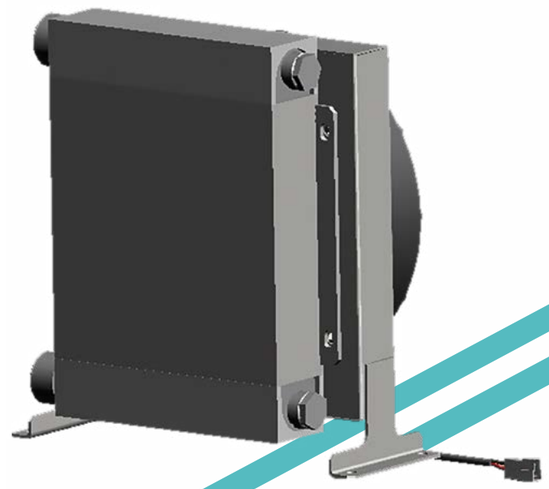

Disponibles en versions à air ou à eau, nos modèles s'adaptent à une grande variété d'applications industrielles et mobiles.

Faites confiance à l'expertise technique de Vincke pour choisir le échangeurs de chaleur le mieux adapté à vos besoins.

En Vincke disponemos de una amplia gama de componentes hidráulicos especialmente diseñados para el montaje de minicentrales. Nuestro catálogo permite configurar soluciones a medida para una gran variedad de aplicaciones.

Cada año, suministramos más de 10.000 minicentrales hidráulicas, todas ellas fabricadas 100% con componentes Vincke, lo que garantiza la máxima compatibilidad, rendimiento y fiabilidad.

Además, ofrecemos modelos de minicentrales ya montadas, para aplicaciones específicas como remolques hidráulicos y rampas niveladoras, facilitando la integración inmediata en tu sistema.

At Vincke, we offer a wide range of hydraulic components specifically designed for assembling custom power packs. Our catalogue enables you to configure tailored solutions for a variety of hydraulic applications.

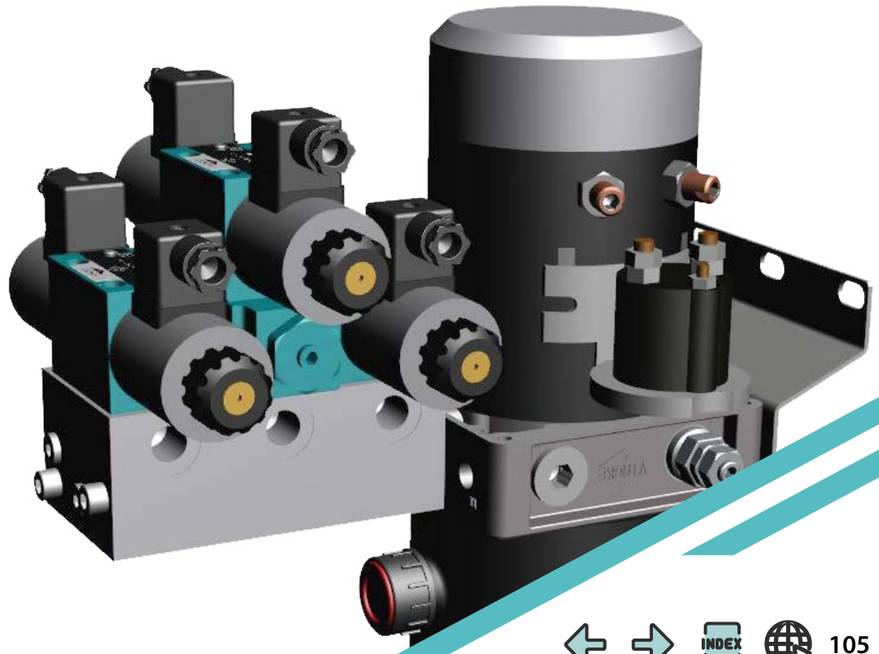

Each year, we supply over 10,000 hydraulic power packs, all manufactured 100% with Vincke components, ensuring maximum compatibility, performance, and reliability.

We also offer pre-assembled units, optimized for specific uses such as hydraulic trailers and dock levellers, making system integration fast and simple.

Vincke propose une large gamme de composants hydrauliques spécialement conçus pour l'assemblage de mini-centrales sur mesure. Notre catalogue vous permet de configurer des solutions adaptées à de nombreuses applications hydrauliques.

Chaque année, nous livrons plus de 10.000 mini-centrales hydrauliques, toutes fabriquées à 100 % avec des composants Vincke, garantissant ainsi une parfaite compatibilité, une performance optimale et une fiabilité durable.

Nous proposons également des unités prémontées, conçues pour des applications spécifiques telles que les remorques hydrauliques ou les niveleurs de quai, pour une intégration simple et rapide.

VALVES EN LIGNE

Todas las válvulas de control en línea son fabricadas por CBF, Vincke mantiene una relación de décadas con esta marca por su calidad y competitividad. Hoy, CBF fabrica una amplia gama de válvulas hidráulicas para el sector de equipos móviles e industriales en constante expansión, y también diseña y fabrica sistemas hidráulicos según las especificaciones del cliente.

All **linear control valves** are manufactured by CBF, a brand with which Vincke has dealt with for decades thanks to its quality and competitiveness. Today, CBF manufactures a wide range of hydraulic valves for the mobile and industrial sectors, which are constantly growing, and design and manufacture hydraulic systems according to client specifications.

Toutes les valves de régulation en ligne sont fabriquées par CBF. Vincke a une relation de plusieurs décennies avec cette marque reconnue pour sa qualité et sa compétitivité. Aujourd'hui, CBF fabrique une large gamme de vannes hydrauliques pour le secteur en pleine expansion des équipements industriels et mobiles, et conçoit et fabrique également des systèmes hydrauliques selon les spécifications des clients.

PUESTA EN MARCHA Y MANTENIMIENTO DE COMPONENTES HIDRÁULICOS VINCKE

Motores, bombas, válvulas y distribuidores

Para garantizar el buen funcionamiento de los componentes hidráulicos, se ruega tener en cuenta:
Los datos técnicos en el catálogo Vincke. Indicaciones generales para la puesta en marcha de instalaciones hidráulicas.
Cumplir las siguientes indicaciones:

LIMPIEZA **LIMPIEZA** **LIMPIEZA**

1. FILTRACIÓN

Las tuberías y accesorios nunca están limpios antes del montaje y deben, por tanto, siempre limpiarse inmediatamente antes de la instalación.
Los tapones de cierre instalados en todas las bombas, motores, válvulas, etc. no deben ser retirados hasta justo el momento de ser instalados.
Se recomienda la filtración del aceite según la tabla TT105 a través de una unidad de filtrado de llenado.

Niveles de limpieza ISO mínimos recomendados por VINCKE

DETERMINACIÓN DE LA FINURA DEL FILTRO			
COMPONENTES	Clase de pureza segun		Finura filtro recomendada en µm
	NAS 1638	ISO 4406	
Bomba engranajes	10	19/16	25
Bomba pistones	1	19/16	25
Bomba paletas	10	19/16	25
Motor hidráulico	1	19/16	25
Válvulas On/Off	1	19/16	25
Válvulas proporcionales	9	18/15	10

TT 105

Según estudios realizados el nivel de limpieza promedio de un lubricante nuevo es ISO 20/18/16
El aceite del sistema debe ser filtrado antes del llenado a través de filtros, normalmente 5 micras, pero en cualquier caso no mayor de 10 micras nominal.
Se recomienda consultar a su proveedor de fluido hidráulico la vida útil de éste.

PUESTA EN MARCHA Y MANTENIMIENTO DE COMPONENTES HIDRÁULICOS VINCKE
START-UP AND MAINTENANCE OF VINCKE HYDRAULIC COMPONENTS
MISE EN SERVICE ET MAINTENANCE DES COMPOSANTS HYDRAULIQUES VINCKE

Ejemplos de daño causados por partículas en el lubricante:

Agarrotamiento del rotor de una bomba de paletas, ocasionado por elevación anormal de la temperatura, a causa de la fricción debida a la presencia de partículas en el aceite.

La principal causa de avería de los componentes de un circuito hidráulico viene dada por suciedad en el aceite, producido por el deterioro del mismo, las altas temperaturas de trabajo, una falta de mantenimiento.

Influencia del nivel de limpieza del lubricante en la vida de componentes hidráulicos.
Alrededor del 80 % de los daños de los componentes de un sistema hidráulico se deben a la presencia de partículas en el lubricante.

Para medir el nivel de limpieza de los lubricantes hidráulicos se han establecido varias normas internacionales, entre las cuales una de las más conocidas es la ISO 4406 que toma como base el número de partículas > 4 micras, > 6 micras y > 14 micras presentes en 1 mililitro de aceite.

2. PUESTA EN MARCHA

Sentido de giro
Observar la flecha de sentido de giro. Ensayo de un elemento lleno de aceite hidráulico. Una conexión y desconexión breve evita deterioros en caso de sentido de giro erróneo.

Llenado
En las bombas y los motores se deben llenar las recamaras antes de proceder a arrancar.

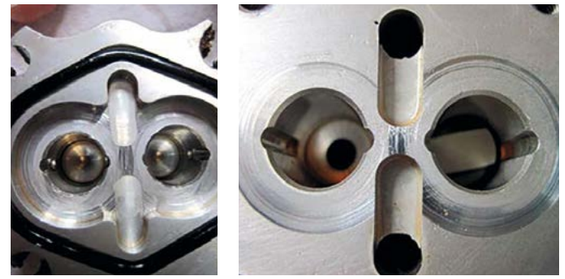

Arranque
Conectar y desconectar brevemente el motor para obtener un purgado suave. Cuando la bomba trabaja uniformemente, marchar a carga plena.
Previamente se debe purgar la línea de presión para permitir un llenado ccompleto de la bomba. El nivel de fluido en el tanque al arrancar no debe ser inferior al mínimo de aspiración.

Regulación de presión
Seleccionar el ajuste respectivo más bajo en la puesta en marcha. Aumentar progresivamente hasta los valores exigidos.

Mantenimiento
Frecuencia, las condiciones de servicio definen los intervalos periódicos de mantenimientos.
Sujeción, controlar el alineamiento correcto de motores, bombas y conductos a presión y temperatura de servicio normales.

Filtros
Controlar los indicadores de ensuciamiento y los filtros de aspiración. El fluido hidráulico debe ser drenado anualmente.

Desgaste prematuro en cuerpo y engranajes de una bomba de engranajes externos

Si el usuario de un equipo no sigue esta recomendación el resultado será la reducción del tiempo de vida útil del mismo.

START-UP AND MAINTENANCE OF VINCKE HYDRAULIC COMPONENTS

Motors, pumps, valves and monobloc directional control valves

To guarantee an optimum performance of the hydraulic components, please take into account:
The technical data of the Vincke catalogue. General instructions for the start-up of the hydraulic power installation.
Meet he following guidelines:

CLEANLINESS **CLEANLINESS** **CLEANLINESS**

1. FILTRATION

The pipelines and accessories are never clean before assembly, they therefore, always have to be cleaned immediately before their installation.
The plastic protection plugs installed in all pumps, motors, valves, etc. should not be removed until they are installed. Oil filtration is recommended according to table TT105 through a filter filling unit.

Minimum ISO cleaning levels recommended by VINCKE

DETERMINATION OF FILTER FINENESS			
COMPONENTS	Purity class according to		Recommended filter fineness in µm
	NAS 1638	ISO 4406	
Gear pumps	10	19/16	25
Piston pumps	1	19/16	25
Vane pumps	10	19/16	25
Hydraulic motors	1	19/16	25
On/Off Valves	1	19/16	25
Proportional valves	9	18/15	10

TT 105

According to studies carried out the average cleaning level of a new lubricant is ISO 20/18/16
The oil of the system must be filtered prior to filling through filters, usually 5 microns, but in any case, no more than 10 microns nominal.
We recommend to consulting your hydraulic fluid supplier for its usable life.

PUESTA EN MARCHA Y MANTENIMIENTO DE COMPONENTES HIDRÁULICOS VINCKE
START-UP AND MAINTENANCE OF VINCKE HYDRAULIC COMPONENTS
MISE EN SERVICE ET MAINTENANCE DES COMPOSANTS HYDRAULIQUES VINCKE

Examples of damage caused by particles in the lubricant:

Rotor seizure of a vane pump, caused by abnormal temperature rise, due to the friction from the presence of particles in the oil.

The main cause of component failure of a hydraulic circuit is due to dirt in the oil, produced by the deterioration of the same, high working temperatures, a lack of maintenance.

Influence of the cleaning level of the lubricant in the life of hydraulic components

Around 80 % of component damage of a hydraulic system is due to the presence of particles in the lubricant.

Several international standards have been established to measure the level of cleanliness of hydraulic lubricants, among which one of the best known is ISO 4406, which is based on the number of particles > 4 microns, > 6 microns and > 14 microns present in 1 mililitre of oil.

2. START-UP

Sense of rotation
Observe the sense of rotation arrow. Test of an element filled with hydraulic oil. A connection and brief disconnection avoids deteriorations in case of erroneous sense of rotation.

Filling
Pumps and motors must be filled with oil before starting.

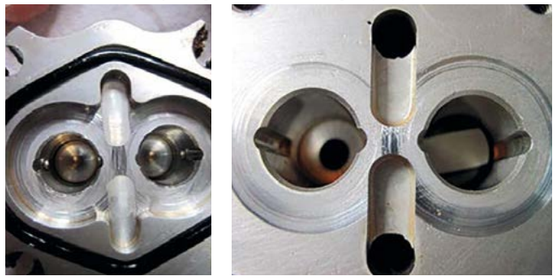

Start-up
Briefly start and stop the motor to ensure smooth priming. Once the pump runs smoothly, switch to full load.
The pressure line must be purged in advance to allow complete filling of the pump. At start-up, the fluid level in the tank must not be below the minimum suction level.

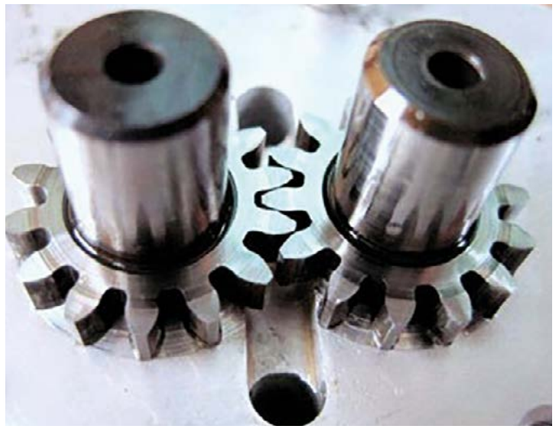

Pressure regulation
At start-up select the lowest respective adjustment. Increase progressively up to the required values.

Maintenance
Frequency: service conditions define the periodic maintenance intervals.
Fastening: check the correct alignment of motors, pumps and pressure pipes and normal temperature of service.

Filters
Check the pollution indicators and the suction filters.
The hydraulic fluid must be drained annually.

Premature wear on body and gears of an external gear pump.

If the user of an equipment does not follow these recommendations the result will be a reduction in the useful life of the same.

MISE EN SERVICE ET MAINTENANCE DES COMPOSANTS HYDRAULIQUES VINCKE

Moteurs, pompes, valves et distributeurs

Afin de garantir le bon fonctionnement des composants hydrauliques VINCKE veuillez tenir compte des points suivants sup:
Les données techniques du catalogue Vincke. Les indications générales pour la mise en service des installations hydrauliques.
Accomplir les indications suivantes :

PROPRETÉ **PROPRETÉ** **PROPRETÉ**

1. FILTRATION

Les tuyaux et les accessoires ne sont jamais propres avant le montage, donc, il faut toujours les nettoyer immédiatement avant leur installation.
Les bouchons d'étanchéité installés dans toutes les pompes, moteurs, valves, etc. ne doivent seulement être enlevés juste avant d'être installés.
Il est recommandé de filtrer l'huile selon la table TT105 à travers une unité de filtrage de remplissage.

Niveaux de propreté ISO minimaux recommandés par VINCKE

DÉTERMINATION DE LA FINESSE DU FILTRE			
COMPOSANTS	Clase de pureté selon		Finesse du filtre recommandée en µm
	NAS 1638	ISO 4406	
Pompe à engrenages	10	19/16	25
Pompe à pistons	1	19/16	25
Pompe à palettes	10	19/16	25
Moteur hydraulique	1	19/16	25
Valve On/Off	1	19/16	25
Valves proportionnelles proportionnelles	9	18/15	10

TT 105

Selon des études réalisées le niveau moyen de propreté d'un nouveau lubrifiant est ISO20/18/16.
L'huile du système doit être filtrée avant le remplissage à travers des filtres, généralement 5 microns, mais en tout cas, jamais supérieure à 10 microns nominal. Il est recommandé de consulter auprès de votre fournisseur de fluide hydraulique la vie utile de celui-ci.

PUESTA EN MARCHA Y MANTENIMIENTO DE COMPONENTES HIDRÁULICOS VINCKE
START-UP AND MAINTENANCE OF VINCKE HYDRAULIC COMPONENTS
MISE EN SERVICE ET MAINTENANCE DES COMPOSANTS HYDRAULIQUES VINCKE

Exemples de dommages causés par des particules dans le lubrifiant:

Grippage du rotor d'une pompe à palettes occasionné par une élévation anormale de la température, à cause de la friction dûe à la présence de particules dans l'huile.

La cause principale de panne des composants d'un circuit hydraulique vient de la saleté dans l'huile,produite par sa détérioration même, les hautes températures de travail, un manque de maintenance de celui-ci.

Influence du niveau de propreté du lubrifiant sur la vie des composants hydrauliques

Environ 80 % des dommages des composants d'un système hydraulique sont dûs à la présence de particules dans le lubrifiant.

Pour mesurer le niveau de propreté des lubrifiants hydrauliques plusieurs normes internationales ont été mis dises en place, l'une des plus connues est le ISO4406 qui est basée sur le nombre de particules > 4 microns, > 6 microns et > 14 microns présentes dans 1 ml d'huile.

2. MISE EN SERVICE

Le Sens de rotation

Observer la flèche du sens de rotation. Essai d'un élément rempli d'huile hydraulique. Une brève connexion et déconnexion évite des dommages en cas de sens de rotation erroné.

Remplissage

Les pompes et les moteurs doivent être remplis avant de démarrer.

Démarrage

Connecter et déconnecter brièvement le moteur pour obtenir une purge en douceur. Lorsque la pompe fonctionne de manière uniforme, marcher à pleine charge.
Précédemment il faut purger la ligne de pression pour permettre un remplissage complet de la pompe. Le niveau de liquide dans le réservoir au moment du démarrage ne doit pas être inférieur au minimum d'aspiration.

Régulation de pression

Lors de la mise en service sélectionnez le réglage correspondant le plus bas. Augmenter progressivement jusqu'aux valeurs exigées.

Maintenance

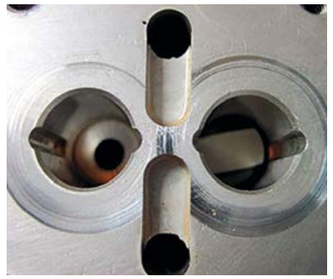

Fréquence: les conditions de service définissent les intervalles périodiques de maintenance.
Fixation: contrôler l'alignement correct des moteurs, des pompes et des conduits à pression et la température de service normale.

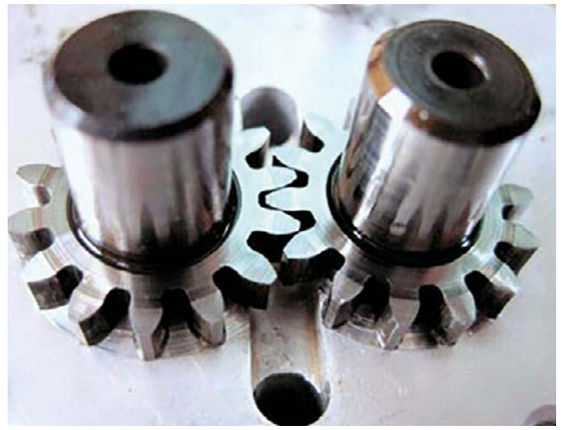

Filtres

Contrôler les indicateurs d'encrassement et les filtres d'aspiration.
Le fluide hydraulique doit être drainé chaque année.

Usure prématurée dans un corps et des engrenages d'une bombe d'engrenages externes.

Si l'utilisateur d'un équipement ne suit pas cette recommandation le résultat sera la réduction du temps de vie utile de celui-ci.
